

## Piercing *RatBar*™

## *Eight Second Breach!!*

When a commercial location is in lock down, every second counts. This multi-purpose tool has been designed for First Responders to breach several different door types.

Its primary use is for outward facing solid industrial doors. With tool in locked condition, drive hardened tip into door surface just above panic bar. Unlock tool and use slide tube to drive spike through door. Using full length for leverage, pry upward to depress panic bar and immediately open door.

To defeat other doors, gates and windows, the patent pending tool also incorporates quick change head options. Insert and lock in place a pry fork or ram/ hammer head. Other head options are available upon request.
