

Pry RatDoor™

The Pry RatDoor™ is an outward opening training door that allows for continued prybar breaches without the high cost of specialized consumables. This high quality training door is the most realistic pry door on the market. Unlike other doors, the operator targets and sets the prybar (Halligan bar) directly into the door/frame gap. During the breach, low cost wood inserts are defeated resulting in a realistic breach.

The door can be installed into a structure or used free-standing with leg kit. The door itself is constructed of structural steel and measures 80" x 34". The frame is also fabricated from structural steel and measures 82" x 38". 16 gauge steel skin is welded to door frame for superior durability and rigidity.

The Pry RatDoor uses low cost wood inserts to create breach resistance. By varying the quantity and wood type, users can simulate residential, industrial and reinforced door breaches. These wood inserts can be purchased or easily be fabricated onsite. Free standing kit can be purchased separately.

Catalog #: Description

TD8036-P	Pry RatDoor (No leg kit)
FSLK	Leg Kit
TD8036-P-WI	Wood frame breaching inserts (100 inserts / box)
TD8036-P-MI	Metal frame breaching inserts (100 inserts / box)
TD8036-P-RI	Reinforced frame breaching inserts (100 inserts / box)
