

## Shot Gun Hinge RatDoor™

The Shot Gun Hinge RatDoor™ is a realistic training door that teaches the proper approach, targeting and dwelling entrance. This high quality door allows the user to defeat lockset side, hinge side or both to gain entry. The Shot Gun Hinge door is secured in position until all targets have been defeated. Once this has been completed, the operator kicks or bumps the door to the ground. Safety hinges along the bottom surface ensure safe and controlled breaches.

The Shot Gun Hinge RatDoor™ can be installed into a structure or used free-standing with optional leg kit. The door itself is constructed of structural steel and measures 80" x 34". The frame is also fabricated from structural steel and measures 84" x 40". High strength ABS polymer skin has a heavily textured surface to help reduce the risk of slipping when entering the dwelling.

Door uses low cost wood inserts to represent the locksets and hinges. By varying the thickness and type of wood, users can simulate residential and industrial door breaches. These wood inserts can be purchased or easily be fabricated onsite. Free standing kit can be purchased separately.
